This version of the claims replaces and supercedes all prior versions of the claims.

1. – 36. (Cancelled)

37. (New) A medical apparatus adapted for use with a capsulated medical apparatus, said capsulated medical device having an imager for obtaining an image, said capsulated medical device transmits a signal of image data to an external reception apparatus that is placed outside of the body, the medical apparatus being placed outside of a body and is different from the external reception apparatus, the medical apparatus comprising:

a communication section capable of at least receiving the image data of the image from the external reception apparatus;

a drive power supply section including a battery for supplying a driving power to at least the communication section; and

a display section for displaying at least the received image data.

38. (New) The apparatus according to claim 37, wherein the drive power supply section is further capable of supplying the driving power from an external power supply.

39. (New) The apparatus according to claim 38, further comprising a signal processor which processes the image data to display the image.
